

How to make **good** and **difficult** decisions

Introduction

About NETWAYS

- Focused on Datacenter Solutions
- Open Source Service & Support
- Based in Nuremberg, Germany

Loving Open Source since 1995

About Me

- CEO @ NETWAYS
- Co-Founder of Icinga
- DevOpsDays Core Member

@gethash

Do I have the **qualification** to
talk about that?

Of course!

How many decisions do we
make in an average **day**?

35,000

A blue cat is peeking out from behind a large, roasted turkey in a refrigerator. The turkey is in a red roasting pan. To the left of the turkey is a carton of fresh milk and a jar of blueberry jam. To the right is a can of soda. The refrigerator shelves in the background contain various items like eggs, a green bottle, and some produce.

Food

Choices

To decide means to
make choices

There are **easy** and **hard** choices

In an **easy choice** one alternative
is better

Hard choices have **advantages** and
disadvantages in different perspectives

Hard choices are hard because
there is **no best option**

If technical **comparisons** like more, less,
or equal don't work it is a **hard decision**.

How to make good choices

How to make good choices

Avoid stress

Under stress the **fight-or-flight**
mode is activated

Cortisol **blocks** the **PFC** and
creates a “fog” in your brain

Under stress it is very **hard** to
leave the **comfort zone**

How to make good choices

Avoid perfection

There's just **no perfect solution**

The magical number seven

(plus or minus two)

Bad things can happen while
aiming for **perfection**

Strive for the ideal preserves a lot
of cognitive effort and the
potential for a **stress blowout**

Life is too short!

Biases

A photograph of two cars racing on a paved road. In the foreground, a dark-colored classic muscle car is driving towards the viewer. In the background, a blue sports car is also driving towards the viewer. The road is flanked by trees and a rocky embankment under a clear blue sky.

Really?

Biases

Self-serving bias

We do everything to **maintain**
and **enhance** our **self-esteem**

Possible Solution I

Create a good **culture of failure**

Possible Solution II

Try to make **friends**

Biases

Confirmation bias

We tend to be put off by * that
make us feel **uncomfortable** or
insecure about our view

Possible Solution

Watch out for the **opposite**

Biases

Cognitive fluency

We often **misattribute**
the **sensation** of ease about
something to the thing itself.

Because **familiarity** enables easy mental processing, it feels fluent. So people often equate the feeling of **fluency** with familiarity.

Possible Solution

If it sounds good, be **careful!**

Biases

Sunk cost bias

My personal “**favourite**”!

We want to make the **investment**
worth our while

We become **attached** to our
commitments

We **fear failing** and looking **foolish**

Possible Solution I

Focus on **future** invests and costs

Possible Solution II

Evaluate the **status quo** as if it
was just another option

Possible Solution III

Create a good **culture of failure**

Recap

Not making a decision is also a
decision, cause **others will make**
that decision for you

The **power** of decision-making is
our **greatest gift**

When there is no best choice we
should create our own **reason**

Hard decisions are **chances** to
decide **what we want to be**

Thank You!
